

Introducing Sandboxie

There is a new type of program that will allow you to surf the Web risk free!

This security tool runs your web browser in a secure shell that is completely isolated from the rest of your computer. Any virus, spyware, or other corruption that you encounter while browsing the web is locked in this secure sandbox keeping your computer free from damage.

How is Sandboxie different than my standard Virus protection?

Standard virus protection works by identifying files that are listed in a database and then blocking or removing them from your system. The innate weakness with this layer of protection is that it is reliant on the known virus database to identify new threats. When a new virus is created your antivirus program must update its database to effectively protect you. If you encounter a threat before your antivirus is ready to identify and defeat it, you can still become infected.

If you are downloading a known file you will be prompted to pull that data out of the vault and onto your actual computer. Viruses and other stealth attacks stay locked in this secure zone and get wiped out when your session closes.

Do I still need traditional anti-virus software?

You will still need a good virus protection solution on your computer to protect against the traditional viral infections that can be spread by using flash drives, or moving email attachments or infected work files out of your Sandbox.

In our office we do not see infections from these types of viruses anymore... unless our customer does not have any protection. Threats we are seeing on a daily basis are the kind that Sandboxie is designed to eliminate.

Is this new system easy to use?

Sandboxie is very is easy to use. The fully licensed version automatically becomes the host for any internet browser on your system. Even your email application like Outlook or any other can be launched using this secure sandbox tool.

Although the application is simple to use it is critical to set it up correctly. At West Chester Computer Doctors we offer an \$85 package that includes:

1. A lifetime license for all of your home computers
2. Set up and user training on one computer (\$50 setup fee for additional computers)
